

<Marine Organism Rearing Log>

9 AM, October 31, 2022

Weather: Sunny

Water temperature: 17.5°C

We started second-half round of measuring tritium concentration of bodily fluid of abalones. We transferred some abalones from the tank with ALPS treated water to the regular seawater reserve tank at noon then will sample 1, 2, 4, 8, and 16 hours later.

Moreover, we also sampled for radioactivity analysis from flounders reared for a month.
