

## <Marine Organism Rearing Log>

9 AM, January 5, 2023

Weather: Sunny

Water temperature: 17.3°C

In order to prevent death of the abalones, we are transferring them to a bigger tank from the end of December 2022 to avoid injuries caused by high density of population. Since abalones are not good at moving along curves, we changed their shelter to a rectangular one (flat surface). I hope that they would spend comfortable time in the new environment.
