

<Marine Organism Rearing Log>

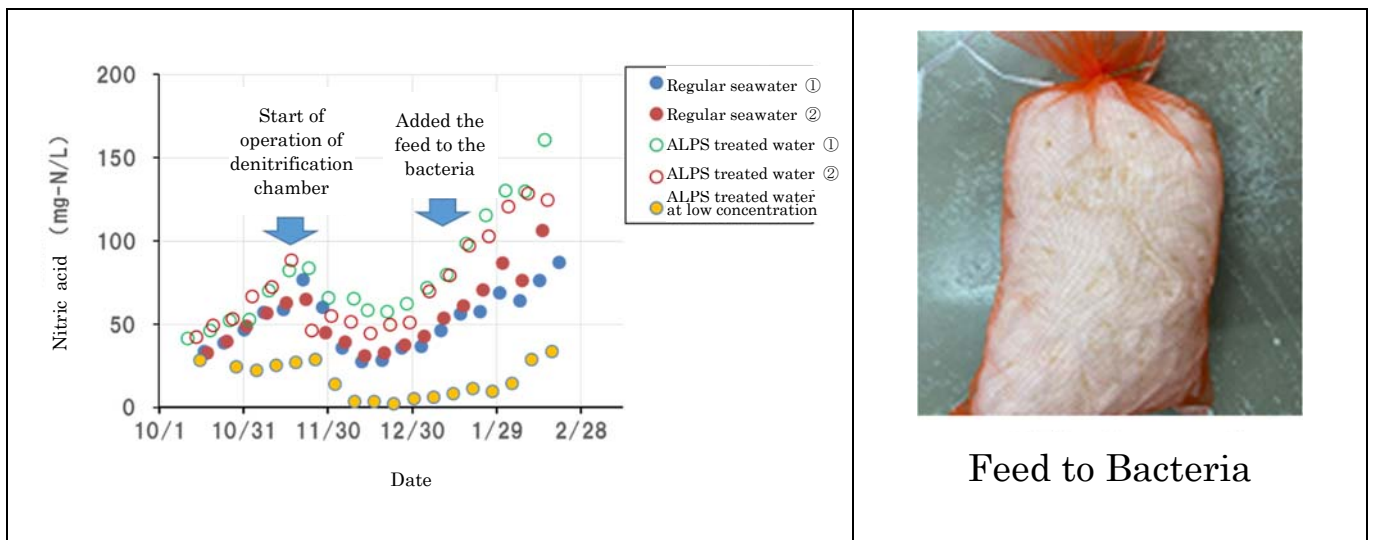

9 AM, February 22, 2023

Weather: Sunny

Water temperature: 17.7°C

In the rearing facilities during a succession of cold days, though the spring is coming closer. The function of the denitrification chamber, which decomposes nitric acid into nitrogen gas, has started to drop. We are investigating the causes and the countermeasures while comparing the function with that of the denitrification chamber in the rearing training facilities. At first, we added the feed to bacteria in order to facilitate the decomposition ability at the beginning of the year.

<Next report will be on February 24, 2023>

Feed to Bacteria
