

<Marine Organism Rearing Log>

9 AM, March 29, 2023

Weather: Sunny

Water temperature: 17.8°C

Abalones grow about 1mm per month. As the average was 57.7mm at the start of rearing in October last year, it should be 62 to 63mm at the end of March. However, the average of abalones that died in March was 58.1mm, suggesting that they lost the fierce competition for the feed under the situation where it was reduced due to the water flow that swept it away.
