

<Marine Organism Rearing Log>

9 AM, April 5, 2023

Weather: Sunny

Water temperature: 18.1°C

We started to clean the dirt on the shelter in the abalone tank today. Since it is not adherent, it can be easily removed with a sponge with a handle for cleaning cups. We use an underwater vacuum cleaner to suck the removed dirt, and a protein skimmer and filter to remove the dirt drifting in the water.
