

<Marine Organism Rearing Log>

9 AM, April 11, 2023

Weather: Sunny

Water temperature: 18.2°C

This is a story about the parasites that afflicted the training rearing of flounders in June 2022. No parasites have been detected at the rearing test facility since receiving the flounders in September 2022. We will continue to check oral cavity of flounders sampled for measuring radiation and to detect eggs in the rearing tanks.

Check for parasites in the mouth of a flounder

Microscopic check for parasite eggs in the rearing tank
