

<Marine Organism Rearing Log>

9 AM, April 13, 2023

Weather: Sunny

Water temperature: 18.2°C

“Spring ocean swaying gently all day long.” However, it would change so fast to the rainy season, and the extreme heat season will begin. This is the season experienced at the rearing test facility for the first time. We are planning to install a roof over the observation platform so that visitors can see the facility even in the rain, and to install a partition curtain to increase the efficiency of the air-conditioner to control the rise in the rearing water temperature.
