

<Marine Organism Rearing Log>

9AM, July 27, 2023

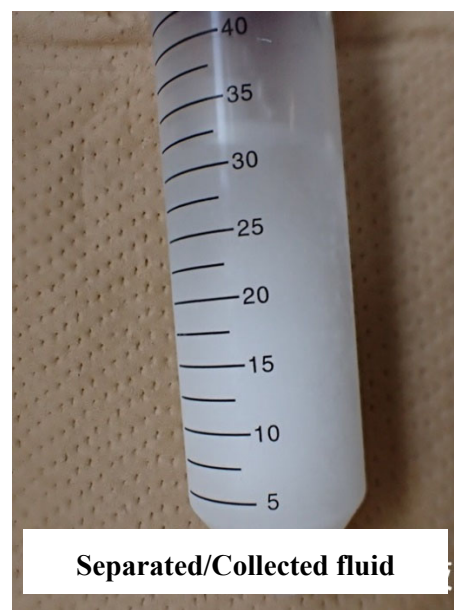

Weather: Sunny

Water temperature: 18.1°C

We have already reported the results of tritium concentration measurements for the bodily fluids of flounder, but since bodily fluids are collected during pretreatment when analyzing tritium concentrations in muscle, we are taking additional measurements of this fluid to improve the accuracy of our data. Samples are taken after freeze-drying each specimen in a centrifuge tube.

Flounder flesh (before)

Separated/Collected fluid
