

< Marine Organism Rearing Log >

9:00 AM, August 7, 2023

Weather: Sunny

Water temperature: 18.2°C

We have been posting videos of flounder reared in normal seawater and ALPS treated seawater to YouTube. Today, we took a photo from the flounder's point of view (from near the bottom of the tank) of the underwater camera that we use to film these videos. The flounder is probably thinking, "There's something fishy about this guy."
