

<Marine Organism Rearing Log>

9 AM, August 18, 2023

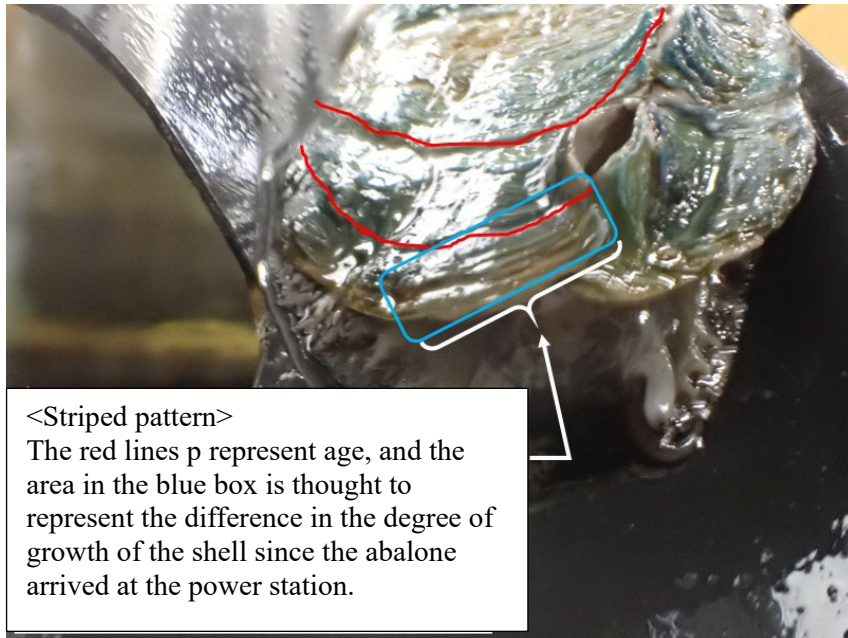

Weather: Sunny

Water temperature: 18.5°C

Cleaning the abalone tank is done by propping the feeding board against the tank wall. When this is done, the feeding board is exposed to the air for a moment, which allowed us to take a close-up photo of an abalone from the front.

The striped pattern on the abalone, which shows its age and growth, can be seen in this photo.

(Next report will be on August 21.)

<Striped pattern>
The red lines represent age, and the area in the blue box is thought to represent the difference in the degree of growth of the shell since the abalone arrived at the power station.

The number of dead abalone / removed for research

	No. of dead abalones		Removed for research	
	8/11-8/17 (No.)	Survival Rate (% Accumulated)	8/11-8/17 (No.)	Accumulated (No.)
Regular seawater ①	1	65.8	0	0
Regular seawater ②	0	58.1	0	0
ALPS water added ①	2	60.9	0	0
ALPS water added ②	2	54.2	0	1

*During this period, one flounder with poor growth in regular seawater (2) weakened and expired.

*For accuracy, counted from Friday of the previous week to Thursday
