

<Marine Life Rearing Log>

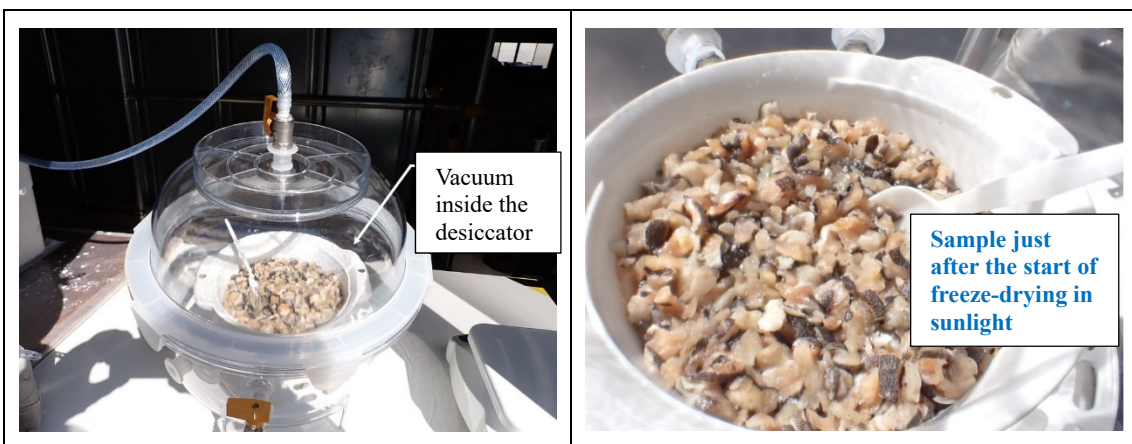

9 AM, October 13, 2023

Weather: Sunny

Water temperature: 18.7°C

The desiccators used for freeze-drying are placed on a sunny windowsill so that they are exposed to the sun. Since the inside of the desiccator is in a state of vacuum, no light heat is transmitted from the outside, but we anticipate that the far-infrared rays from the sun will warm the specimens and promote drying. It is the same as the principle employed during the making of dried fish.

<Next report will be October 16th.>
