

<Marine Life Rearing Log>

9 AM, October 16, 2023

Weather: Sunny

Water temperature: 18.3°C

The equipment for the rearing test has been in use for more than 13 months, including the period prior to full-scale testing. Piping and pumps are cleaned regularly to maintain function, but the UV lamps in the seawater sterilization equipment, which reduce the risk of disease, have all been replaced because long-term use has diminished their ability to sterilize.
