

<Marine Life Rearing Log>

9 AM, December 4, 2023

Weather: Sunny

Water temperature: 18.1°C

The older flounder at the training and rearing facility are the survivors of a hematophagous parasite infestation that occurred in June 2022. Younger flounder kept in the same seawater have also been infected by the same parasite. We will talk more about the life cycle of this parasite and countermeasures to fight it in more detail in the next log.
