Note)

•The values of the exposure dose and the number of the workers in the table above are subject to change, because there are times when APD data are replaced with monthly dose data measured by integral dosimeters. Or dose data of workers who wore only an integral dosimeter (ex., workers who entered only the Main Anti-earthquake Building) need to be updated in the table after the publication of the data.

•Depending on the prime contractors, there are some cases in which the internal exposure dose is recorded as that of the WBC measurement month, not the inhalation exposure month.

•Basically, internal exposure dose should be recorded as that of the month including the day when radioactive materials were inhaled, which we call here an "inhalation day." However, regarding all or most of the data indicated with # in the table, they are recorded as the exposure dose of the month including the WBC measurement day, not the inhalation day.
